

Harshit Laxkar

Software Development Engineer

hlaxkar@gmail.com ◇ linkedin.com/in/hlaxkar ◇ github.com/hlaxkar ◇ Pune / Bangalore, India

PROFESSIONAL SUMMARY

Software Development Engineer with nearly 3 years of experience building high-throughput, microservice-based platforms, distributed pipelines, and telemetry monitoring systems. Hands-on expertise in designing event-driven architectures, Kafka-based stream ingestion, RESTful APIs, and cloud-native services in Unix/Linux environments. Proficient in Python, TypeScript, JavaScript, SQL, and Angular/React, with proven experience in OpenTelemetry observability, system optimization, and AI-assisted engineering (Cursor, GitHub Copilot). Adept in agile engineering, clean design patterns, and cross-functional collaboration to deliver robust network management and enterprise platforms.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, PHP
- **Backend & Microservices:** Microservices Architecture, REST APIs, Fastify, Node.js, Express.js, Event-Driven Design
- **Streaming & Messaging:** Apache Kafka, RabbitMQ, Event Replay, Stream Ingestion, Pub/Sub Pipelines
- **Databases & Caching:** PostgreSQL, MySQL, Redis, MongoDB, Database Indexing & Query Optimization
- **DevOps, Cloud & OS:** Unix/Linux, Docker, Kubernetes, AWS (S3, EC2), Git, GitHub, CI/CD Pipelines
- **Observability & Reliability:** OpenTelemetry (Distributed Tracing, Metrics, Logging), High Availability, SLA Monitoring
- **Frontend:** Angular, React, TypeScript, HTML5, CSS3, Tailwind CSS
- **Tools & Methodologies:** AI-Assisted Development (Cursor, GitHub Copilot), Agile/Scrum, Design Patterns, Code Reviews
- **Networking Concepts:** Computer Networks, IP/Ethernet Fundamentals, Telemetry & Transport Signal Monitoring

PROFESSIONAL EXPERIENCE

- **Intangles**

Pune, India

Software Development Engineer - Video Telematics & Streaming

November 2025 – Present

- **Distributed Event & Telemetry Pipeline:** Architected an extensible, vendor-agnostic microservice ingestion framework that validates, deduplicates, persists, and streams high-frequency external webhook telemetry to Apache Kafka at ~500 events/min; enabled zero-downtime onboarding of external data feeds via configuration.
- **Fault-Tolerant Streaming Pipeline:** Designed a publish-first, persist-async event processing architecture with Kafka as the durability boundary and automated event replay for fault isolation; integrated OpenTelemetry distributed tracing and metrics across microservices to optimize latency and ensure operational resilience.
- **Real-Time Device & Signal Monitoring Platform:** Owned end-to-end development of a full-stack platform (React/Angular, Node.js) processing real-time telemetry streams from 3,000+ network-connected cameras across 17 signal types; built multi-region concurrent processing (25–50 streams/sec) with automated anomaly detection and ticketing.
- **AI-Assisted Workflow & Reliability:** Accelerated component refactoring, test suite coverage (unit and integration tests), and technical documentation utilizing AI-assisted developer tooling (Cursor, GitHub Copilot) under agile pair programming practices.

- **Oodles Technologies**

Gurugram, India

Associate Consultant - Full Stack Developer

June 2024 – November 2025

- **Enterprise Backend & API Re-architecture:** Led the backend migration and modernization of an enterprise CRM from legacy PHP to high-throughput Node.js microservices with MySQL; redesigned database schemas and optimized 600+ REST APIs, cutting p99 response times from 15–25s down to 200ms using Redis caching and parallel query execution.
- **Intelligent Analytics & Python Services:** Engineered a data-driven recommendation engine using Python and K-Nearest Neighbors (KNN) algorithms, optimizing memory footprint and execution latency for real-time multidimensional data analysis.
- **Service Integration & Engineering Best Practices:** Developed modular REST microservices and plugin architectures integrating external AI and cloud APIs (OpenAI, AWS); conducted rigorous code reviews, enforced architectural design patterns, and maintained comprehensive API documentation.

- **Genefitletics**

Remote

Full Stack Developer

July 2023 – February 2024

- **Analytical Data Processing:** Formulated algorithmic models in Python and PHP to process, normalize, and evaluate large-scale multi-variant biological and phenotypic datasets with high computational precision.
- **Angular Enterprise Web Applications:** Engineered client-facing Single Page Applications (SPAs) in Angular backed by modular RESTful APIs and relational MySQL databases, implementing responsive dashboards, state management, and role-based access control (RBAC).

EDUCATION

- **UD Rajasthan Technical University**

Bachelor of Technology in Information Technology (B.Tech); CGPA: 8.24 / 10

Relevant Coursework: Computer Networks, Operating Systems (Unix/Linux), Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Analysis of Algorithms, Artificial Intelligence & Machine Learning

Kota, India

December 2021 – May 2024
- **Government Polytechnic College**

Polytechnic Diploma in Engineering; Percentage: 70%

Relevant Coursework: Web Development, JavaScript, Operating Systems, Data Structures, Relational Databases

Kota, India

July 2018 – August 2021
